Competitive Weapon: Customer Service

Prime Law of Networks: “Value explodes exponentially with membership, while this value explosion sucks in more members.” Wired, 7/97, “New Rules for the New Economy”

Must Solve Business Problem: Protect and expand the value of your company to its customers and vendors during the shift to web based business.

Solution: Empower your customers, vendors and your people to buy, sell and service via the web. Lead your partners through the shift. Make both technology and service prime tools for getting and retaining customers.

NetworkSuite

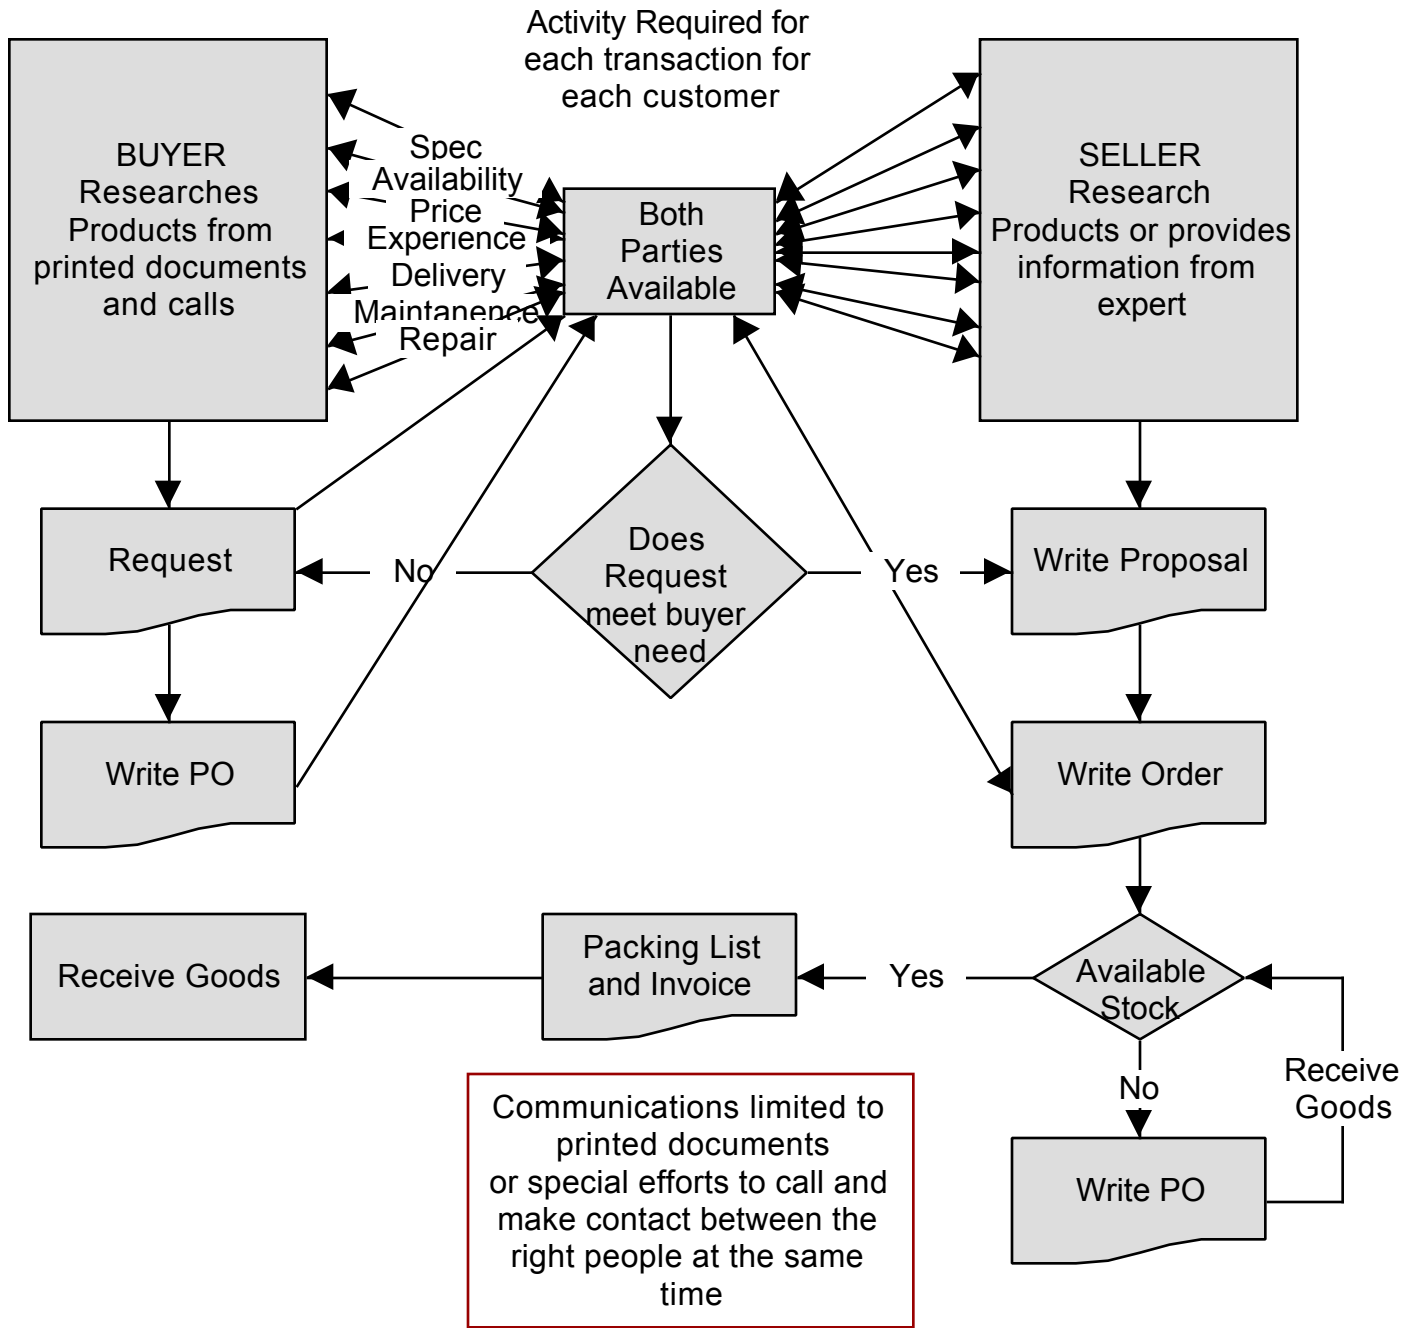

1. NetworkSuite integrates your selling process, your internal operations and the web into an ever-present sales and service tool.
2. It documents the selling efforts of remote sales people, creating a corporate memory of the relationship with each customer.
3. Its ever-presence and access to documentation and order status increases customer service and reduces the need for same time communications.

Current Same Time Communications

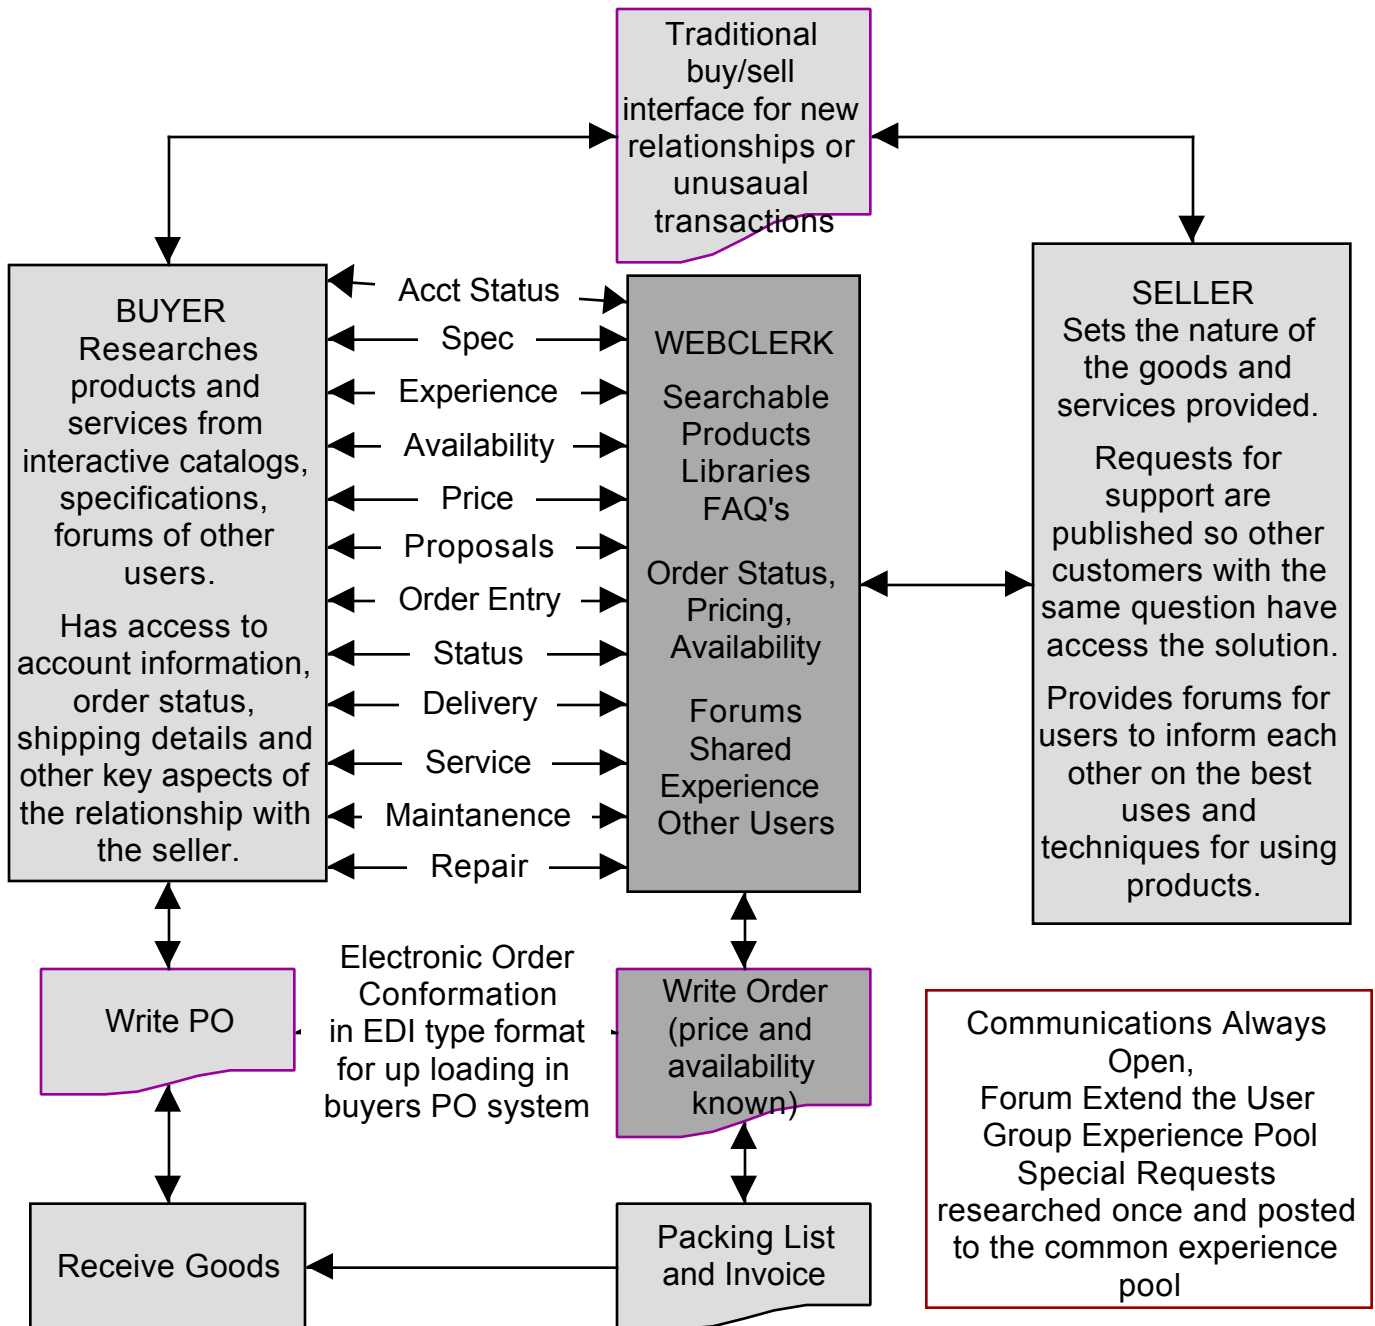

NetworkSuite Communications

Omni present pool of actions and information integrated into the seller's business system. WebClerk responds individually, at the customer's convenience as if the seller were immediately available to the buyer.

There will still be times when the Buyer and Sell must focus effort at the same time and place in the Traditional selling process. Web transactions frees more time to concentrate on these times.

SupplyChainSuite™

Integrating IntraNets, ExtraNets
and Data for Entire Industries

Common language and tools
between trading partners

Competitive Weapon: Common Language

Prime Law of Networks

“Value explodes exponentially with membership, while this value explosion sucks in more members.”
As stated in Wired, 7/97, “New Rules for the New Economy”

Financial Indicator of Network Value

Companies and products which grew as the networks dependent on them grew.

Trading Partners, Separate Islands of Technology and Data

SupplyChainSuite is a Communication Matrix of Technology and Data

Multiple translations are required between trading partners. The number of translations explode exponentially with each added task and each new company. Price lists are very difficult. EDI, customer service, product documentation, etc... are seemingly impossible.

Manufacturer's products, cross referenced to distributors, tied to specifications, sales documentation and service creates a rentable language for near zero cost of transacting between trading partners. Instead of each company translating each partner's data, SupplyChainSuite is a common translation communicated through inexpensive technology.

Lower Costs -- Higher Value

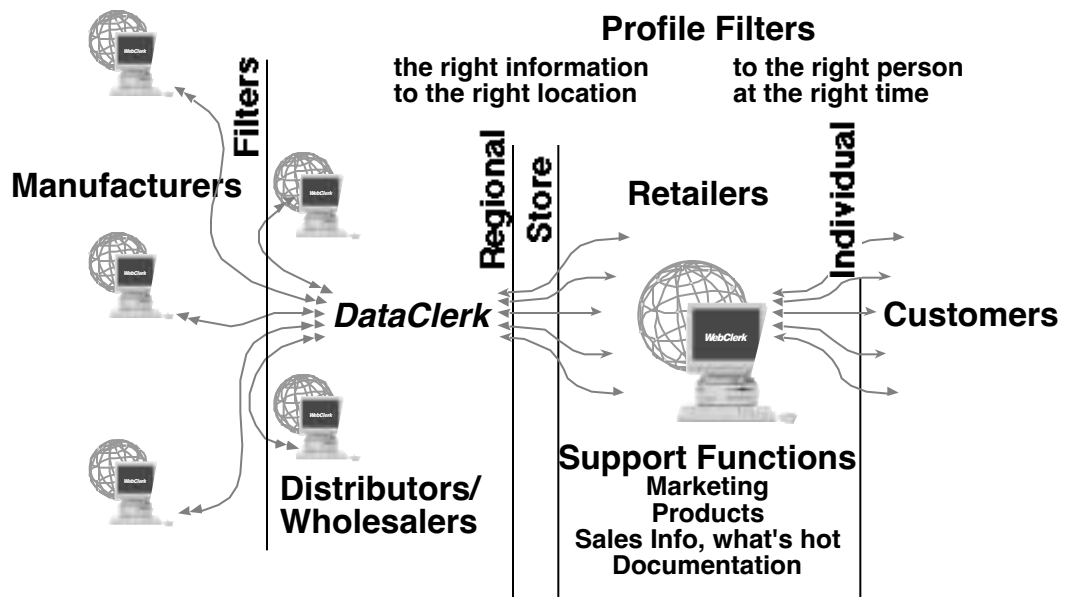

SupplyChainSuite Technology Components (leveling the technical playing field)

theCustomer	ERP software for manufacturers and distributors
RetailClerk	ERP software for retailers
DataClerk	Umbrella name for industry specific data sets (BikeClerk, WineClerk, VideoClerk, MusicClerk, etc....)
WebClerk	Web based communications capabilities for communicating the common data between trading partners.
Custom	Custom integration with existing ERP solutions.

Integrating physical and virtual business systems with the data they serve.

SupplyChainSuite Support Components (leveling the scale playing field)

IT Central	Central support for common data, user profiles and equipment.
IT Specific	Technology support for business specific and proprietary data.
Purchasing	Coop buying power across the matrix.
Sales	Reviews of products and services. What is hot, what is not.
Virtual-	
Inventory	Transact sales of virtual-inventory to increase turns and returns on resources.
Marketing	High quality, regionally targeted and business tailored marketing materials.
Advertising	Product launch support for manufacturers and distributors.

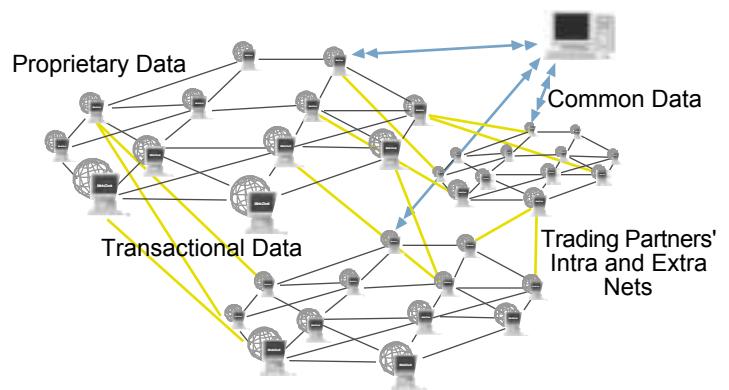

SupplyChainSuite's Protection

Intellectual Property

All businesses are intellectual property companies. The only thing that makes them unique or competitive is who they know and how they do business with them. Products and services are simply the token following the relationship.

Unlike ASP's (Application Service Providers), critical intellectual property stays within the firewalls of the company. Common data is updated across the networks.

SupplyChainSuite brings the value of networks to entire industries.

About JIT

Contact: Bill James
Address: James Integrated Technologies
350 E. County Road D.
St. Paul, MN 55117
Numbers: Phone: 651-484-9549
Sales Line (toll-free): 800-735-0635
Fax: 651-484-9551
Internet: <http://www.jitcorp.com>
<http://www.webclerk.com>
bill@jitcorp.com

JIT was started in 1989 by Bill and Chris James. They created a software company whose products could make other companies sales driven, while removing mystery from the sales process.

In most companies, sales is a black box in which everyone prays, and hopes something will come out to feed the company for the next cycle.

The objective of JITCorp products is to increase profitable sales by creating a process flow that makes each action in the sales process clear and understandable; measurable and with direction.

Founder Backgrounds

Christine James is a 1972 graduate of Bevard College. She is experienced as the Controller and Chief Financial Officer for three small businesses which experienced radical growth. Chris is no longer active in the company.

Bill James is a 1972 West Point honors graduate in math, physics, engineering and chemistry. He was also an All-American wrestler. He spent eight years as an Infantry Commander, Airborne, Ranger. He worked six years for Honeywell setting up factories in the US and Europe. In 1986 he founded Applied Statistics, Inc, a leading company in Statistical Process Control software. He wrote **theCustomer** to make sales a clear, understandable, and repeatable process. He wrote **WebClerk** to bring cost effective ecommerce to the market.

JIT's Background

There are currently thousands of users operating JIT's enterprise software.

In 1997 JIT completed its web capabilities and released its cross and mixed platform applications.

Press - Top 10 Technology Companies

METRO

BY JEFF BARBIAN AND INGRID SKIONG

DECEMBER 1998 • ComputerUser 53

Digi International®

Local companies make good

As home to some of the most influential computer, software and Internet companies in the country, Minnesota is rich with innovative products and fresh ideas ready for action in 1999. From world-renowned software giants to cutting-edge Web site masters just making their mark, we've compiled a list of 10 local companies that made an impact on the tech industry in 1998 and are poised to grow in the coming year. 1999 brings us one step closer to the new millennium, and if these 10 firms are any indication of things to come, the state of Minnesota's technological industry for the new year and beyond looks bright.

6. James Integrated Technologies

If the best things in life are free, James Integrated Technologies is on to something. In an effort to heavily penetrate the Twin Cities e-commerce market with cutting-edge applications, the firm staged a promotional giveaway of \$6.5 million worth of its e-commerce software last year, including WebClerk, and its enterprise offering theCustomer WebClerk, a pre-fabricated Web site, commercial database and server application. Allows users to import their data and graphics and begin taking orders via the Web in minutes.

The freeweb was a hit, and the firm will repeat the giveaway this month with \$6.5 million worth of JIT software. "The more people the product, the more valuable it becomes," says company president Bill Johnson, adding that he expects JIT's revenue to reach \$100 million within three years. E-commerce retailing is gaining in popularity, and point-to-point communication increasingly is yielding to matrix approaches. "These new technologies are priced our parity to traditional means like fax machines, and according to James will soon be just as prolific. JIT's bottom line? Faces are paid—go with the Web. Visit JIT at www.jit.com."

BEST OF BUSINESS

panding business enterprises in the Twin Cities and eight inner-ring suburbs (Minneapolis, St. Paul, Hopkins, Columbia Heights, Hilltop, South St. Paul, West St. Paul, St. Anthony, Mendota, and Lauderdale). The Urban Initiative Program was modeled after the Rural Challenge Grant program, which provides assistance to businesses located outside of the Twin Cities metropolitan area.

The program has made 144 loans to 109 businesses totaling \$5.7 million in state and matching funds, which has resulted in the creation of 375 jobs with more than 100 expected to be added over the next year. Each dollar of state funds must be matched by a dollar of private funds.

Best New High-Tech Product
James Integrated Technologies (JIT), a 25-person firm located in St. Paul, prides itself on beating

goliaths like Microsoft, Netscape, and Oracle to the punch. Its secret weapon for slaying the giants? It's called *WebClerk*, an e-commerce order-processing application designed for business-to-business use. "We de-

ecided that it wouldn't take long before Microsoft or some other giant would try to crush us," says JIT President Bill James. We're hoping to get a six- to eight-week lead and establish a significant installed base, before somebody

else bigger recognizes the potential of our product," he says. The difference between WebClerk and other e-commerce tools is its simple design; users just import the needed data and graphics and begin taking orders on the Web. James, who created WebClerk, says the tool can get a Web server up and running and begin doing business on the Internet in 10 minutes.

WebClerk is a freebie right now, but JIT has plans to charge for it in the future. Today, there's a CD-ROM that includes the application and training materials for \$40, and future releases will be priced at \$649. "We priced WebClerk around the same price as a fax machine, recognizing that all companies will be on the Web in the not too distant future," says James. "This will replace the way people send data. It will be easier to hook up and put data directly on your Web site."

James Technologies

www.jitcorp.com

Within three years it will be rare to FAX anyone.

WebClerk's affordable web serving and database functions will replace FAXing as the standard for unattended communications.

Reduce Labor Costs while Providing Better Service

- FAX and eMail require labor to receive, sort, interpret and respond.
- WebClerk responds immediately when a customer requests information.
- WebClerk can take orders and requests for changes to orders directly into your enterprise system without labor.
- WebClerk automatically relates associated information to a customer query. Example, a query about order status displays order and shipment tracking information.

Increase Quality

- FAXes produce rough black and white images.
- WebClerk delivers 4 color images and multimedia presentations.
- FAXed-in orders may contain out-dated products and services.
- WebClerk displays only currently available products and services, matching current pricing to the customer's type (retail, wholesale, etc...)
- WebClerk interactively publishes your technical documentation, sales presentations, FAQ's, Forums....
